

Field Services

Field Maintenance & New Construction

Cessco provides fully integrated field repair and construction services including project management, planning and scheduling, engineering, quality control and supervision of a multi-trade work force.

Our customers operate within the oilsands, power generation, petroleum refining, petrochemical, fertilizer, pulp and paper, coal, and mining industries.

A listing of typical on-site services provided by Cessco includes:

- Plant maintenance & repairs
- Shutdowns/turnarounds
- Emergency repairs (immediate response)
- Field erected equipment
- Construction
- Piping installation
- HRSG (Cogen) erection
- Heat Exchanger bundle pulling and rebuild
- In-situ overlay and specialty welding
- Boiler maintenance and rebuild
- Vessel tray installation

This is a brief listing of what we do; but what we deliver is professional, co-operative, effective and safe solutions to our clients' on site needs, all fully backed by our Engineering, Quality Control and Shop expertise.

Since 1948

Fort McMurray Fabrication Shop

Located at the Centre of Alberta's Oil Sands for immediate availability to local clients, Cessco's Fort McMurray Shop provides the same certification, quality and service our clients have come to rely upon. With a fabrication area of 9,000 sq. ft. on 2.5 acre yard and storage, our services include:

- Spooled Piping
- Structural Steel
- Pressure vessel fabrication and repair
- Heat exchanger repair
- Shearing
- Ductwork
- Overlay Welding
- Module Assembly

We welcome and appreciate your interest in our company.
