

**Plate Forming &  
Fabrication Services**

Cessco supports our industrial client base through supply of pressure vessel components, pressure vessel repair and testing, construction equipment repair, custom stress relieving, custom weld overlay, and custom welded fabrication in all grades of material from Carbon Steel and ChromeMoly to Stainless Steel, Clad plate and other Low temperature applications.

Cessco offers cutting, beveling and plate rolling services for customers that produce tanks and smaller pressure vessels for process applications. Our plate rolling equipment allows us to roll plates at a 12' shell course length and 8" thick. In addition, we have the capability to form ASME 2:1 semi elliptical heads up to 36" diameter and a variety of cones and eccentric reducers. Using the CNC cutting table allows us to provide the accuracy required for quality fabrication. At Cessco, every job, big or small is a custom project. Conformance to specification and commitment to delivery is our mark of achievement.

We welcome and appreciate your interest in our company.
